

HYGIENIC TRAINING AND CERTIFICATION IN RUSSIA

YAKIMOVA IRENE

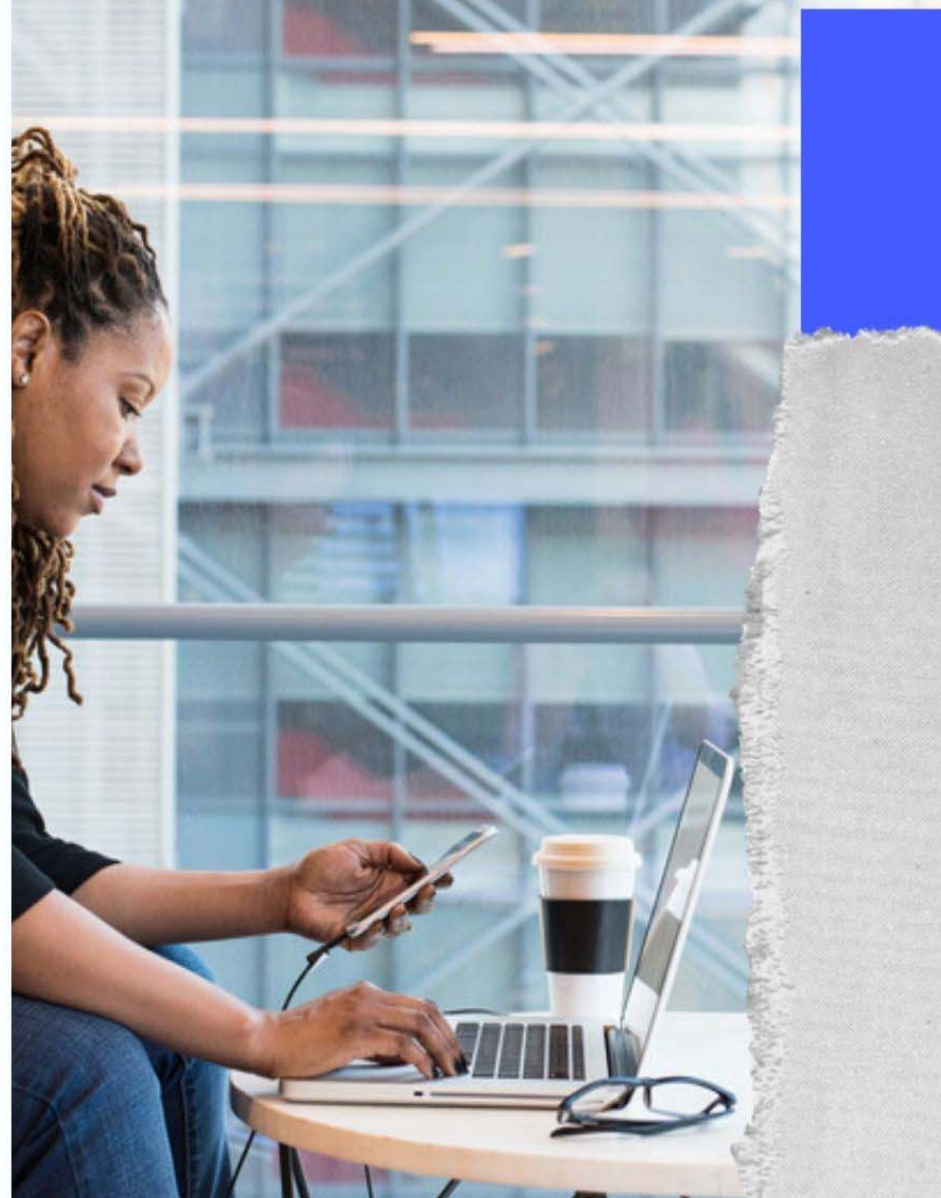

The living conditions, as well as the lifestyle of the average person, are currently such that they inevitably lead to the spread of mass infectious and non-infectious diseases among the population. In this regard, the issues of hygienic education are especially relevant, as they are preventive in the field of protecting public health and contribute to strengthening the health of each individual.

In this regard, the issues of hygienic education are especially relevant, as they are preventive in the field of protecting public health and contribute to strengthening the health of each individual.

Since the majority of the population are able-bodied working people, including people undergoing professional hygienic training and certification (whose professional activity is directly related to the sales of food products, drinking water, contact with children, as well as those who are engaged in household and public services), health indicators and the morbidity structure of the population directly depend on their health indicators.

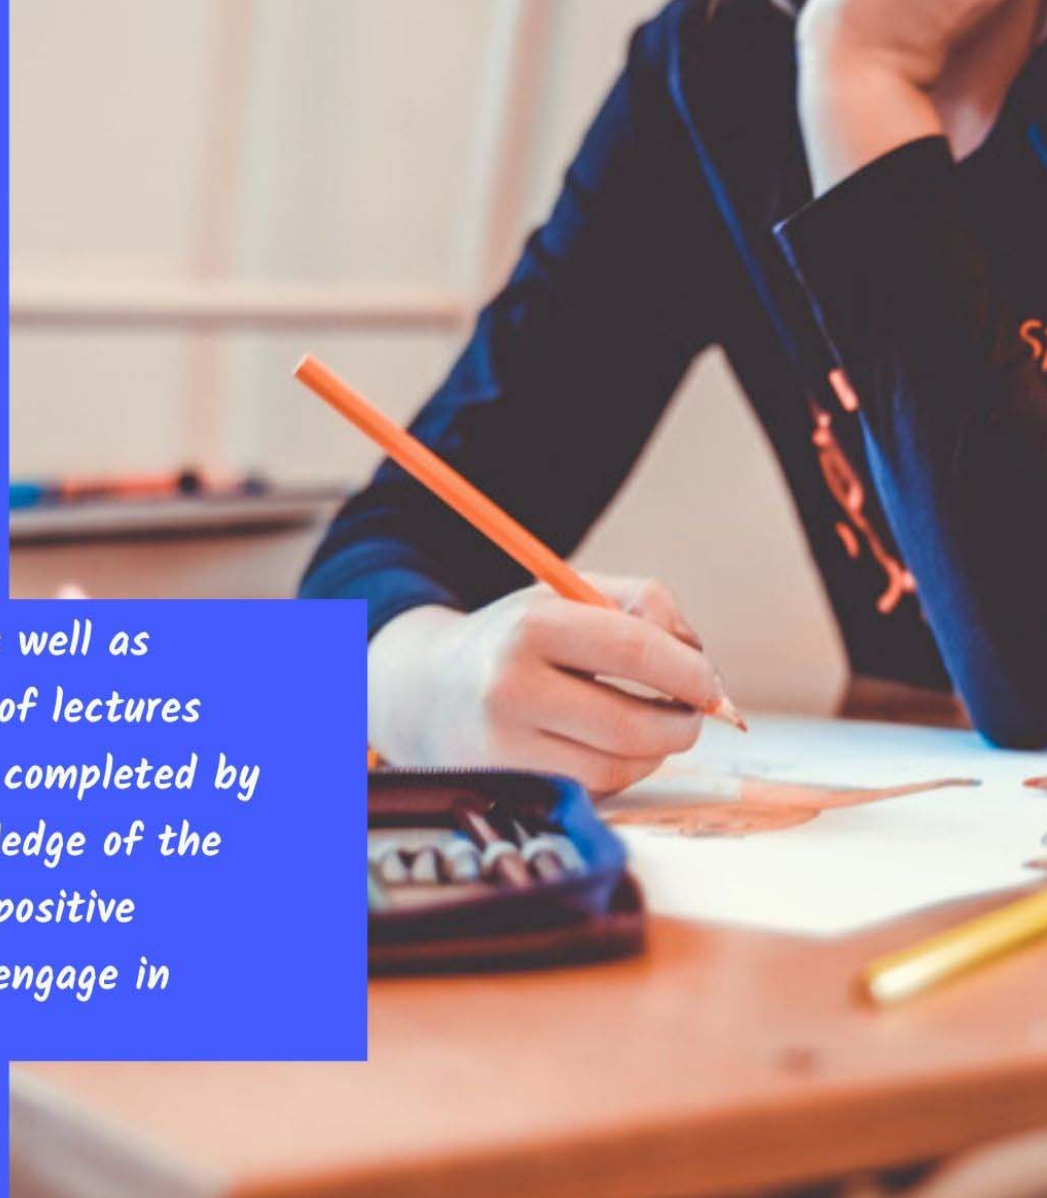

IN THE **RUSSIAN FEDERATION**, THERE IS A SYSTEM OF PROFESSIONALHYGIENIC TRAINING AND CERTIFICATION, WHICH CAN REDUCE THE RISK OF OCCUPATIONALMORBIDITY (INJURIES, INFECTIOUS DISEASES, SOMATIC PATHOLOGIES). OCCUPATIONALMORBIDITY MAKES A LARGE CONTRIBUTION TO THE MORBIDITY OF THE POPULATION AS A WHOLE,SINCE NOT ONLY INDIVIDUAL NEWLY EMERGED DISEASES ARE SUBJECT TO ACCOUNTING, BUTALSO THE DETERIORATION OF THE ACTIVITY OF VARIOUS ORGANS AND ORGAN SYSTEMS ACQUIREDOVER MANY YEARS AS A RESULT OF THE PROFESSIONAL ACTIVITIES OF EACH WORKER. FROM THEABOVE IT FOLLOWS THAT THE SYSTEM OF PROFESSIONAL HYGIENIC PREPARATION ANDCERTIFICATION EXISTING TO THIS DAY IS VERY IMPORTANT AND RELEVANT.

People can have intramural training as well as remote one. Materials include a course of lectures and practical classes, the courses are completed by testing to determine the level of knowledge of the employee. If the exam is passed for a positive assessment, the worker is allowed to engage in professional activities.

The passage of professional hygienic training and certification is confined to the passage of medical examinations by workers, which is also accompanied by obtaining admission to professional activities.

Thus, in the Russian Federation there is a single interconnected system that can reduce the risk of occupational diseases and injuries, which is important for the health of the population as a whole.

thank you for your attention!
